

M-5770

Melon Sapo Orange Flesh

New arrival in the PIEL DE SAPO melons with ORANGE FLESH. In addition to the exclusive orange flesh color, this variety is noted for its great homogeneity in shapes and sizes, its good adaptation both to early cultivations in greenhouse and late cultivations in open field during midsummer. The rind has a typical netting of the traditional piel de sapo melons which appears in its optimum state of maturity. The flesh is crunchy with excellent organoleptic quality and very good conservation. The average weight is between 1.5-2 kg in early cultivations until 4-5 kg in late cultivations in midsummer.
